Communications and Social Media

The Department of Epidemiology has made an effort to develop a full suite of digital and print platforms that ensure the department’s visibility well beyond the Columbia University Medical Center Campus. These presences have become particularly important for trainees and are helping us achieve a unique footprint among our peers to complement our scientific output.

Mailman School events calendar
mailman.columbia.edu/events
2x2
A quarterly publication that explores timely population health questions from the perspective of epidemiologic science. Archived issues of 2x2 can be found at mailman.columbia.edu/academic-departments/epidemiology/news-department

the 2x2 project (the2x2project.org)
Providing “health beyond the headlines,” the 2x2 project is a department-sponsored site that delivers public health news, analysis and commentary, and trains future science communicators. The site disseminates epidemiological and public health science insights to the greater public to engage readers in the health conversation.

EpidemiologyMatters (epidemiologymatters.org)
A digital forum providing up-to-date methodological resources for trainees and practicing epidemiologists.

Share your work and contribute to communications
We encourage faculty and trainees to contribute to all of these initiatives. Your contributions are our most powerful tool to keep these outlets fresh, dynamic, and inclusive, and advance our mission of influencing the public health conversation for the betterment of public health everywhere. For information on how to contribute, visit mailman.columbia.edu/academic-departments/epidemiology/communications. We can also help you to share your work with our broader community through 2x2 and social media. If you have a paper, a poster, or a talk and you would like to share your findings, please get in touch with Kathryn Gerlach at kg2594@columbia.edu.
