The Initiative for Maximizing Student Development program (IMSD) at Columbia’s Mailman School of Public Health supports doctoral students from historically underrepresented groups who are committed to the biomedical and behavioral sciences.

As a student in one of the Mailman School’s doctoral degree programs, you will gain the theoretical expertise needed to develop diverse research, create new knowledge, and craft solutions to address the most pressing public health challenges of the 21st century.

The IMSD program will provide you with financial and professional development resources to prepare you for a successful academic or research-oriented career:

• Tuition benefits
• Funds to travel to one scientific conference each year while you are a student
• A graduate assistant position and a faculty mentor
• Special bi-weekly seminars and workshops focusing on the professional development and research skills needed to succeed in graduate school and a research career

To be considered for funding by the IMSD program, students must be:

• Accepted for full-time enrollment in any of the research-focused public health doctoral programs in the Mailman School
• Citizens or permanent residents of the United States
• Committed to developing a research workforce that includes members of groups who are underrepresented in the biomedical and behavioral sciences
