

**Mailman School Course Catalog**

The goal of this course is that those having completed it will have the skills and tools needed to make a useful contribution to nutrition programs and/or nutritional assessment in emergency situations. Each session has a specific learning objective, as noted below. Every attempt will be made to ground course materials in real-life situations and examples. Also, since food and nutrition emergencies do not happen in a vacuum, the course also deals to some degree with the larger context of the politics of under-nutrition in non-emergency situations and how the continued neglect of under-nutrition globally and in many countries poses challenges for addressing food and nutrition emergencies.

Credits: 1.5

Usual pre-requisites: 1.5

Usual required permissions: P6103, P6104, or the Quant core module; P8687

Department requirement for:

Certificate elective for:
