Models, Measures and Mixed Methods in Implementation Science

Lawrence A. Palinkas, Ph.D.
Albert G and Frances Lomas Feldman Professor of Social Policy and Health
Chair, Department of Children Youth and Families
Vulnerable youth need evidence-based services

• One in five youth in the United States are in need of mental health services (New Freedom Commission, 2003).

• There are currently 415,000 youth in child welfare in the United States today (Admin Child Fam., 2015).

• 50% of these youth need mental health services (Burns et al., 2004).
Evidence-Based Practices in Child Welfare and Child Mental Health

• Coping Cat (Kendall & Hedtke, 2006)
• Incredible Years (Webster-Stratton et al, 2014)
• Multisystemic Therapy (Henggler et al., 1998)
• Parent Child Interaction Therapy (Eyberg et al., 1995)
• SafeCare (Gaura-Edwards et al., 2011)
• Trauma-Focused Cognitive Behavioral Therapy (Cohen & Mannarino, 2004)
• Triple – P Positive Parenting Program (Sanders, 2012)
• Treatment Foster Care Oregon (Chamberlain et al., 2007)
• www.cebc.org
These youth are not getting the services they need

• Only 20% of youth who need mental health services get the services they need (Kataoka et al., 2002).
• 90% of publicly-funded child welfare, mental health and juvenile justice systems do not use evidence-based practices (Hoagwood & Olin, 2002).
• Only half of all children in child welfare receive care consistent with any one national standard and less than 10% receive care consistent with all 10 national standards (Raghavan et al, 2010).
The scientific study of methods to promote the systematic uptake of research findings and other evidence-based practices into routine practice, and, hence, to improve the quality and effectiveness of health services (Eccles/Mittman, 2006)

b Controlling for county, year, state, treatment condition, and collaborator
Lessons Learned from Semi-structured Interviews

• Systems leaders use three other types of evidence when considering whether to seek and apply research evidence in making decisions:
  – evidence of resources necessary and available for making use of research evidence (supply),
  – evidence of the need for research evidence, usually obtained from local conditions of client and service needs (demand), and
  – personalized evidence gained from experience (i.e., is the research evidence consistent with practice experience).

University of Southern California
1. People tend to be overly oriented to the present rather than the future (temporal discounting); they are more concerned about losing something they have than about gaining something they have not yet experienced (loss aversion); and they are very sensitive to monitory incentives, especially those that are most tangible.

2. People are cognitively limited, using heuristics or rules of thumbs to make complex decisions rather than going through all possible choices; they exhibit decision fatigue, which accounts for a preference for less rather than more choice; and they are influenced by how choices are framed (framing).

3. People’s preferences are influenced greatly by the environment and can be manipulated, especially through advertising.

Model of EBP Implementation in Randomized Clinical Effectiveness Trials

Pre-Implementation Determinants

- Training opportunities
  - Lag time between training and use
  - No. of clients

- Clinician engagement in clinical trial
  - Motivation
  - Enthusiasm
  - Commitment

- Clinician-treatment fit
  - Prior experience with evidence-based treatments
  - Theoretical orientation
  - EBT structure vs flexibility

Short-term Implementation

- Clinician first impressions
  - Positive
  - Negative

- Clinician competence
  - Researcher assessment
  - Self-assessment
  - Client assessment

- Clinician and researcher adaptability
  - Creativity
  - Compromise

- Clinician-researcher interactions
  - Professional
  - Social

Long-term Implementation

- Child Steps support
  - Ongoing training
  - EBP adaptation

- Clinic support
  - Leadership
  - Organizational Culture
  - Culture broker

Sustainability

Black = individual
Red = organizational
Green = cultural

Transactional Model of EBP Implementation
Mixed Methods and Measures

- Identify core components and their interrelationships across time for sustainability of prevention programs and their support infrastructures.
- Design a measurement system for monitoring and providing feedback regarding sustainment.
- Pilot test the predictability of the Sustainment Measurement System (SMS) and the feasibility and acceptability of this system to evaluate and improve sustainment likelihood.
SAMHSA Ce-PIM Partnership

• Four SAMHSA Prevention Programs:
  – Strategic Prevention Framework State Initiative Program (SPF-SIG) (3 grantees, 17 staff, 2 GPOs)
  – Drug-Free Communities Support Program (DFC)/Sober Truth on Preventing Underage Drinking (STOP ACT) (2 grantees, 7 staff, 3 GPOs)
  – Garrett Lee Smith State and Tribal Youth Suicide Prevention (GLS) (3 grantees, 10 staff, 2 GPOs)
  – Implementing Evidence-Based Prevention Practices in Schools (PPS) (2 grantees, 6 staff, 2 GPOs)
Methods

• **Data Collection**
  • Open-ended questions about experience with implementation and sustainment and identification of barriers and facilitators to sustainment.
  • Free list exercise to elicit participant conceptions of what is meant by the term sustainment, what elements of their program they wish to see sustained, and what it will take to sustain those program elements.
  • Checklist of domain elements from the Consolidated Framework for Implementation Research (CFIR: Damschroder et al., 2009).
Methods

• **Data Analysis**
  - Inductive thematic analysis based on coding, consensus, co-occurrence and comparison (Willms et al, 1992)
  - Enumeration and categorizations of weighted free list items using constant comparison.
  - Percent of informants citing CFIR domain as high or very high importance.
  - Mean domain score (0 = not important, 1 = yes/no, 2 = important, 3 = very important).
<table>
<thead>
<tr>
<th>Theme</th>
<th>Examples</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Funding</strong></td>
<td>“Funding. Let’s just be very clear. Funding is very important. Continued funding.” (STOP-ACT grantee)</td>
</tr>
<tr>
<td></td>
<td>“Well, I think that in order to sustain human resources, capital people working on it full time, I’d say it absolutely takes money.” (SPF-SIG grantee)</td>
</tr>
<tr>
<td>Consistency with</td>
<td>“I think that one of the... I don’t know if it would make or break the continuation but I think its impactful is agency culture for lack of a better expression.” (GLS grantee)</td>
</tr>
<tr>
<td>organizational culture</td>
<td></td>
</tr>
<tr>
<td>Coalition/collaborator</td>
<td>“We built a sustainability team, to look at their authorizing environment, to look at the value they’re producing in the community ... those people who give you authority to do the good things you want to do in your community; and help them think through sustainability through that lens.” (SPF-SIG grantee)</td>
</tr>
<tr>
<td>Positive Outcomes</td>
<td>“We saw a decrease of unwanted behaviors of students in the classrooms that had the consistency with implementation of the Good Behavior Game” (PPS grantee)</td>
</tr>
<tr>
<td></td>
<td>“If the outcomes were comparable with modes of service delivery in terms of preventing hospitalization for re-attempts or serious episodes of suicide ideation, then... I think you have an evaluation that is really designed to learn about the compared effectiveness of mode of service delivery within which you would not only contribute to the evidence base for what works, but also trying to make a compelling case for these services to become fundable outside of the grant stream” (GLS grantee)</td>
</tr>
<tr>
<td>Evaluation</td>
<td>“Set up a monitoring instrument and an evaluative tool initially as you start out and set and look for milestones and periodic benchmarks. To make sure it’s moving in the right direction.”</td>
</tr>
<tr>
<td>Planning</td>
<td>“If they submitted a community readiness plan, I am a firm believer that doing one is going to give us a glimpse of existing efforts in community, is leadership on board, is there knowledge in the community, do they have resources. Do they have a word for suicide? Usually, when grant begins, folks are off running. Spend your money, spend your money. They are not being very strategic. What I am doing with folks I am working with, I say stop, don’t do that. Let’s be more strategic. (GLS GPO)</td>
</tr>
<tr>
<td>Champion</td>
<td>“…a full-time person...to oversee the program. That doesn’t mean that the process itself is gone just because a full time person isn’t there. But it does mean that you don’t have that dedication. You may not have that resource capital that you need to do things with the intensity that you want to have them done. So, when you got a full time person, that’s someone that’s devoted to providing that program constantly, beginning with the social norms campaign now or getting the word out constantly.” (SPF-SIG grantee)</td>
</tr>
<tr>
<td>Infrastructure/capacity</td>
<td>“Because we are funded right now, we can...we have the capacity to essentially have enough staff to manage that kind of volume”</td>
</tr>
<tr>
<td>Institutionalization</td>
<td>“For me, it becomes how does it start to become institutionalized. In some ways, you create this blueprint, this plan and while in these first couple of years, we don’t meet everything, that’s still there. That’s still the goal. How do we move it forward so those things continue to happen.” (SPF-SIG grantee)</td>
</tr>
